New Features

No new features were added in this release.

Fixed Bug List

The following bugs were fixed in this version. For detailed information, see the [Fixed Bug Details](#) section below.

Key	Summary
CONSORT-4831	Script to change code value mapping for V00 to blank
CONSORT-4832	Fix for scheduled reports error in PHC Hub
CONSORT-4834	Fix for errors caused by long lot numbers
CONSORT-4835	Update vaccination record with non-IIS-assigned ID or name using value submitted in RXA-10
CONSORT-4836	Sporadic occurrence of query responses including (or not including) the Vaccination Forecast information as expected

Known Issues

The following are known issues with this release:

- The Attestation Report is currently not working.
- Version numbers do not display at the bottom of the left navigation menu.
- As previously noted in the PHC Hub v. March 2018 Release Notes, code changes are required in IWeb to complete the downstream functionality to support the relaxed consistency logic for matching VFC Eligibility and Funding Source. Clients should see fewer message rejections related to PHC Hub processing for VFC Eligibility and Funding Source, but may not see a change in lot decrementing or IIS data retention until changes have been made in IWeb.

Fixed Bug Details

The following lists the detailed information about each of the bugs fixed in this version:

Key	Summary	Affects Client	Description
CONSORT-4831	Script to change code value	All	This script is a workaround to map 'V00' to blank for every existing import profile. This change was made to universally resolve issues arising from the use of the deprecated V00

Key	Summary	Affects Client	Description
	mapping for V00 to blank		value so that each individual import profile did not need to be manually changed. Note: This only addresses 'V00', not any other unrecognized value like 'foo'. It only updates existing received values an Import Profile has created. Any new profiles will not inherit the workaround.
CONSORT-4832	Fix for scheduled reports error in PHC Hub	All	Changes in this version resolve the failure to generate scheduled reports in PHC Hub. Note: Affected versions are 4.17.5.2+ with enabled Keycloak SSO.
CONSORT-4834	Fix for errors caused by long lot numbers	All	Messages that would otherwise be successful will err if they include lot numbers that are too long to be accepted by the SIIS table. This issue will be resolved by truncating the lot numbers to fit into the H33_VACCINATION_PRE_RESERVE table.
CONSORT-4835	Update vaccination record with non-IIS-assigned ID or name using value submitted in RXA-10	All	This fix returns the handling of non-IIS-assigned vaccinators submitted via HL7 to previous functionality. When an HL7 message includes a non-IIS-assigned vaccinator ID or name in RXA-10, the vaccination record will be updated with the value submitted in RXA-10.
CONSORT-4836	Sporadic occurrence of query responses including (or not including) the Vaccination Forecast information as expected	All	This fixes the sporadic occurrence of query responses including (or not including) the Vaccination Forecast information as expected. Query responses will now include vaccination forecast information only when requested.

Product Documentation

Product documentation is located on the STC Documentation Portal:
<https://documentation.stchome.com/>.

The following documents are available for this version of PHC Hub:

- PHC Hub (v. July 2018) User Guide

- PHC Hub (v. March 2018) Quick Reference Guides (QRGs) are still applicable
