

SMaRT AFIX

Release Notes

v1.17.5

Table of Contents

General Changes 1

Independent User Management..... 2

Known Issues..... 3

General Changes

The following general changes are available with this release:

1. The length of the VFC Eligibility field has been increased to accommodate all standard descriptions
2. Small changes related to CDC AFIX Online Tool schema
3. General cleanup to scripts
4. Updates for improved ETL performance
5. A section for the topic of "Missing Immunizations and Missed Opportunities in SMaRT AFIX" is now included in the User Guide.

Independent User Management

The following additional functionality is now available within SMaRT AFIX for Independent Awardees.

Note: This functionality and associated page will not be available to IWeb Awardees.

1. The new Manage Users page is now available only to users with the Management User role¹ in Independent Awardee states.
2. The Manage Users page can be found by clicking on the user image icon located on the far right side of the header bar, then click on the Manage Users link that appears.
3. Users with the Management Users role can:
 - a. View the first name, last name, username and email of users
 - b. Search for users using the first name, last name, username or email
 - c. Enable/Activate a user's access within SMaRT AFIX
 - d. Initiate the Password Reset process for the user.

¹ This role can be assigned only by Admin Users through Keycloak.

Known Issues

Users should be aware of the following limitations and/or known issues that may occur:

1. Small numbers might be automatically formatted as dates within CSV files due to Excel formatting defaults. This is unlikely to occur in regular use cases.
2. Print functionality may be affected by the user electing to print prematurely. This can be remedied by allowing the display to fully load before requesting the print.
3. SMaRT AFIX may not always display a time-out warning. This issue will be addressed with consistency across the STC Suite of Products. In the meanwhile, if this occurs, simply sign out and log back in.
4. Due to changes being made in IWeb, we notice that some inactive patients are being included in SMaRT AFIX cohorts. This is a temporary situation that will be resolved by the patch expected in June.
5. Records containing discontinued vaccines may provide atypical results.
6. Rarely, patients with influenza only records may not appear on the full patient list.
