SMaRT AFIX

Release Notes

v1.17.5.2

Table of Contents

Bug Fixes

The following bug fixes are available with this release:

Patient Active/Inactive Status

Resolution of an issue affecting a patient's inclusion in the cohort. Patients marked inactive or deceased will no longer appear on patient lists or be included in coverage rate calculations for the assessed facility.

Known Issues

Version 1.17.5.2

Users should be aware of the following new limitations and/or known issues that may occur:

- Custom reports run successfully for all patients when the "All Races (Default)" filter selected, but no data is returned when other race filters are selected. The issue does not affect any other custom report filters and will be addressed in a forthcoming patch.

Version 1.17.5.1

The following known issues were previously declared with the SMaRT AFIX 1.17.5 release:

1. Small numbers might automatically be formatted as dates within CSV files due to Excel formatting defaults. This is unlikely to occur in regular use cases.

2. Print functionality may be affected by the user electing to print prematurely. This can be remedied by allowing the display to fully load before requesting the print.

3. SMaRT AFIX may not always display a time-out warning. This issue will be addressed with consistency across the STC Suite of products. In the meanwhile, if this occurs, simply sign out and log back in.

4. Records containing discontinued vaccines may provide atypical results.
