Release Notes

v1.17.5.1

Table of Contents

- Issues Affecting the Provider Landing Page 1
- Issues Affecting the Data Summary Dashboard 1
- Issues Affecting the Onboarding Module 1
- Issues Affecting the Interface Form 1

Issues Affecting the Provider Landing Page

- The logic for the landing page reports has been changed to capture data for the last 7 days instead of for the last 30 days. This change was made to improve syncing with the UI
- The pie chart for Record Errors Received by PHC Hub will now display the total percentage of vaccination and patient level errors combined as 100%

Issues Affecting the Data Summary Dashboard

- The Top 5 Warnings report now displays the correct tooltips
- The 10-day time interval text in the Record Errors Received by PHC Hub report now does not overlap the selected month when this option is selected

Issues Affecting the Onboarding Module

- Deselecting (unchecking) from an onboarding workflow any onboarding stage that has providers in it will now display a warning message to alert the user that removing that onboarding stage will also remove the providers currently in that stage

Issues Affecting the Interface Form

- The total score for a provider in the Provider List menu will now match the answer scores for their submitted interface form
