# Issues Affecting the Entire Application

- Reports available on all the trends dashboards will now display a message 'Filters not changed' when user tries to click search multiple times without changing the selection criteria on any of the report filters.

## Provider Landing Page

- Records Errors received by PHC-Hub graph will display 'No Errors available for selected criteria' message when there are no errors available for the HL7 messages in past 30 days.

## Provider List

- Provider list will now show the correct search results when the search criteria is expected to return less than 10 results.

## DQA Report

- All the sections of DQA report will now display correct text message when there are no HL7 messages available for the selected criteria.

## Data Summary Dashboard

- Errors received by PHC hub report will display correct text message when there are no errors to be reported for the selected time period.

## Data Volume Dashboard

- A bug causing iQ to display incorrect performance count for 'Organizations with highest/ lowest number of messages has been fixed.

# Onboarding Module

- A bug displaying 'Something went wrong' message on the Provider Profile page when a provider is added to the global filter which is not yet added on to the provider list has been fixed now.
- Global Contacts: As of this release, user will be able to search for a contact from multiple pages on global contact list.

# Interface Form

- As of this release, all the interface form questions will have scores assigned to each of the answer options.
